

Welcome to the 42<sup>nd</sup> edition of 'AMES High', which aims to keep you, our customers and suppliers informed about major changes and developments at AMES in the Design, Production and CAMO fields.

## New Certification under the LOI Concept

AMES DOA was certified according to the new EASA Part 21J "Level of Involvement" concept as first DOA in Austria. The certification process was extremely successful, and we have gained a high-level rating

in all categories. This means, that we can continuously support our customers with highest flexibility and in line with this quite challenging rule making processes. Daniel Maier, Managing Director and our Quality Team are proud having achieved this milestone within a very short timeframe, due to our vast experience of over 1500 certification projects.

"Our customers will benefit from the high level of expertise in our unique One Stop Shop."

## AMES at the AIX, Hamburg 31. March – 02. April 2020

As you are all well aware this year's Aircraft Interiors Expo (AIX) in Hamburg was postponed following the escalation of COVID-19 in Europe. Currently the new show dates are unknown yet. It is always AMES' intention to stay in close contact and regular communication with our valued

customers, especially in challenging times like at the moment. For this reason, we offer our customers the opportunity to schedule an online meeting in the upcoming weeks to discuss current cooperation, projects and any potential future requirements you may have.

**Please feel free to get in touch with us (services@ames.co.at) and schedule your online meeting with our engineering, production & sales team anytime.**

**WE ARE LOOKING FORWARD TALKING TO YOU!**

## AMES Services and Business Continuity Plan

No doubt, the situation for the global Aviation Industry is challenging in present times. AMES Group is and will remain a reliable partner for all our customers and for all our employees and their families. We fully support the actions taken by our government and by legislative bodies all over the world and appreciate the hard work of all the people on the front line working to keep the effects on all of us as little as possible. AMES has established a Business Continuity Model allowing all our business units to remain fully operational and functioning during this challenging period. For all our engineering & certification team members we have temporarily introduced teleworking to ensure all projects continue smoothly and our customers are provided with all the support and engineering capacity they need. Our production and maintenance facility remain fully operational in a dual shift system in order to support all our customers hardware requirements as usual and as expected.
